

IMPLEMENTACION EN LA NUBE

SOFTWARES DONDE SE INTENTÓ REALIZAR LA IMPLANTACION EN LA NUBE

PYTHON ANYWHERE

The screenshot displays the Python Anywhere web interface for a user named `iqr.pythonanywhere.com`. The interface includes a navigation bar with links to Dashboard, Consoles, Files, Web, Tasks, and Databases. The main content area is titled "Configuration for `iqr.pythonanywhere.com`".

Configuration Section:

- Reload: A button labeled "Reload `iqr.pythonanywhere.com`".
- Traffic: A section titled "How busy is your site?" containing four line graphs: "Hits per month", "Hits per day", "Hits per hour", and "Hits per minute".
- Code: A section titled "What your site is running.".

Python version: 3.10

Virtualenv:

Use a virtualenv to get different versions of flask, django etc from our default system ones. [More info here](#). You need to **Reload your web app** to activate it; NB - will do nothing if the virtualenv does not exist.

[Enter path to a virtualenv, if desired](#)

Log files:

The first place to look if something goes wrong.

- Access log: [iqr.pythonanywhere.com.access.log](#)
- Error log: [iqr.pythonanywhere.com.error.log](#)
- Server log: [iqr.pythonanywhere.com.server.log](#)

Log files are periodically rotated. You can find old logs here: `/var/log`

Static files:

Files that aren't dynamically generated by your code, like CSS, JavaScript or uploaded files, can be served much faster straight off the disk if you specify them here. You need to **Reload your web app** to activate any changes you make to the mappings below.
